

VOTE ASINI FOR COMMUNITY ZONE [11]

1

More daytime events: Introduce more daytime events so students have the opportunity to be entertained in between lectures as there are currently only a few options available. I will work with the zone to create these events and encourage societies to do the same so that all students can have a greater variety of options when recharging during breaks.

2

Bring back power naps: I understand the impact of power naps on productivity so I will work to introduce a silent sleeping room in the library with bean bags where students can take power naps during long days of studying during exam season without having to face the fear of getting snapped dealing in the library.

3

Guidance for society events: There are many events created by societies however, they are not all attended by the same capacity of students as they could be and some of the organisers are organising an event for the first time. In order to help make these events better, I will expand on the society handbook so it includes guidance on how to plan, advertise and run a successful event.

4

Sustainable accommodation: Students living in university accommodation have a very high energy consumption. It is important to reduce this to become a more sustainable university. I will introduce the Student Energy Project in order to provide an incentive for students to reduce consumption, and will aid in the production of material to increase awareness for the high amounts of energy currently being used.

I'm a second year Biochemistry student and during my time at Surrey, I have been the Asian representative on the Liberation Committee, the Treasurer of the TedxSurreyUni society and the Social Secretary of BioSoc. I have also been part of the Surrey netball team and pole fitness society. My years at Surrey have been so good because of changes that previous students in the union have made and now I want to do my part to make sure it's the same for future Surrey students.
